# Assessment of Climate Change over the Indian Region

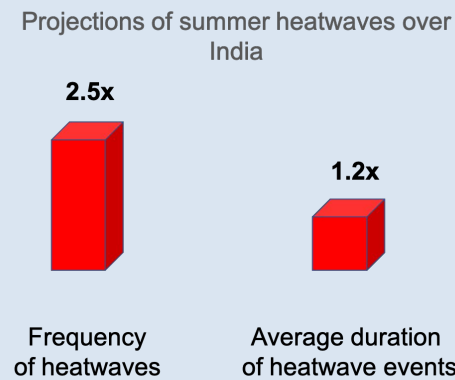

A Report of the  
Ministry of Earth Sciences (MoES),  
Government of India

<sup>1</sup> IPCC SR1.5 (2018). Period: Since pre-industrial times.  
<sup>2</sup> Assessment of Climate Change over the Indian Region, Springer (2020). Period: 1901 – 2018.  
<sup>3</sup> Rise by mid-century under RCP4.5 relative to the average over 1976-2005.

<sup>1</sup> Assessment of Climate Change over the Indian Region, Springer (2020). Period: 1950 – 2015  
<sup>2</sup> Rise by mid-century under RCP4.5 relative to the average over 1976-2005.

Mid-century projections under RCP4.5 relative to 1976 – 2005 (all India average).

### Top 10 hottest years are all after 2010

### Maximum Temperature in Feb 2023 in India was 1.7 degC greater than normal

**India records hottest Feb in 122 years, says IMD**

**HOW WAS FEBRUARY 2023 IN INDIA**

Monthly averaged maximum (day) temperature was highest since 1901

All India Temp. (Maximum) in February (°C)	Normal (Maximum)
2023 29.54	27.80 °C
2016 29.48	
2006 29.31	
2017 29.24	
2009 29.23	

Maximum temperature outlook for March to May 2023

Monthly averaged minimum (night) temperature was fifth highest since 1901

All India Temp. (Minimum) in February (°C)	Normal (Minimum)
2016 16.82	15.49 °C
1912 16.49	
1937 16.45	
2006 16.42	
2023 16.31	

**WHAT ABOUT DELHI**

Average max. temp. in February for Delhi Safdarjung (since 1951 to 2023)

2006	29.7°C
1950	27.9°C
2023	27.7°C

As far as the summer season is concerned, most parts of northeast, east, central and certain areas of northwest India, including Delhi-NCR, are expected to face "above-normal" maximum (day) temperatures during the period when even number of heatwave days may be more than last year. Southern peninsula and most of Maha-

link to climate change) is normally a matter of diagnosis. "It could be part of the climate change due to global warming or could be otherwise also," he said.

On impact of such weather phenomena on agricultural operations, Bhan, who heads the hydromet and agromet advisory services of IMD, said though the

<sup>1</sup> IPCC SR1.5 (2018). Period: Since pre-industrial times.  
<sup>2</sup> Assessment of Climate Change over the Indian Region, Springer (2020). Period: 1901 – 2018.  
<sup>3</sup> Rise by mid-century under RCP4.5 relative to the average over 1976-2005.

Mid-century projections under RCP4.5 relative to 1976 – 2005 (all India average).

## 1 mm rain means

~ 1 liter of rain water in 1 square meter

Volume =  $1\text{m} \times 1\text{m} \times 0.001\text{m} = 0.001\text{ m}^3$  or 1 liter

Summer Monsoon Rainfall received = 850 mm

**That's about 2 million (20 lakh) liters of water per person**

The math:

Area = 3 trillion  $\text{m}^2$

Rain = 850 mm

Volume = 2700 trillion liters

Population = 1.3 billion

Per capita water = 2,000,000 liters

**= 2 million liters of water per person**

Description term used	Rainfall amount (mm/day)
Very light rain (VLR)	0.1–2.4
Light rain (LR)	2.5–7.5
Moderate rain (MR)	7.6–35.5
Rather heavy rain (RHR)	35.6–64.4
Heavy rain (HR)	64.5–124.4
Very heavy rain (VHR)	124.5–244.4
Extremely heavy rain (EHR)	> 244.5

### Mahabaleshwar Rains

19/07/2021 098 mm

20/07/2021 110 mm

21/07/2021 164 mm

22/07/2021 480 mm

23/07/2021 600 mm

1080 mm in two days

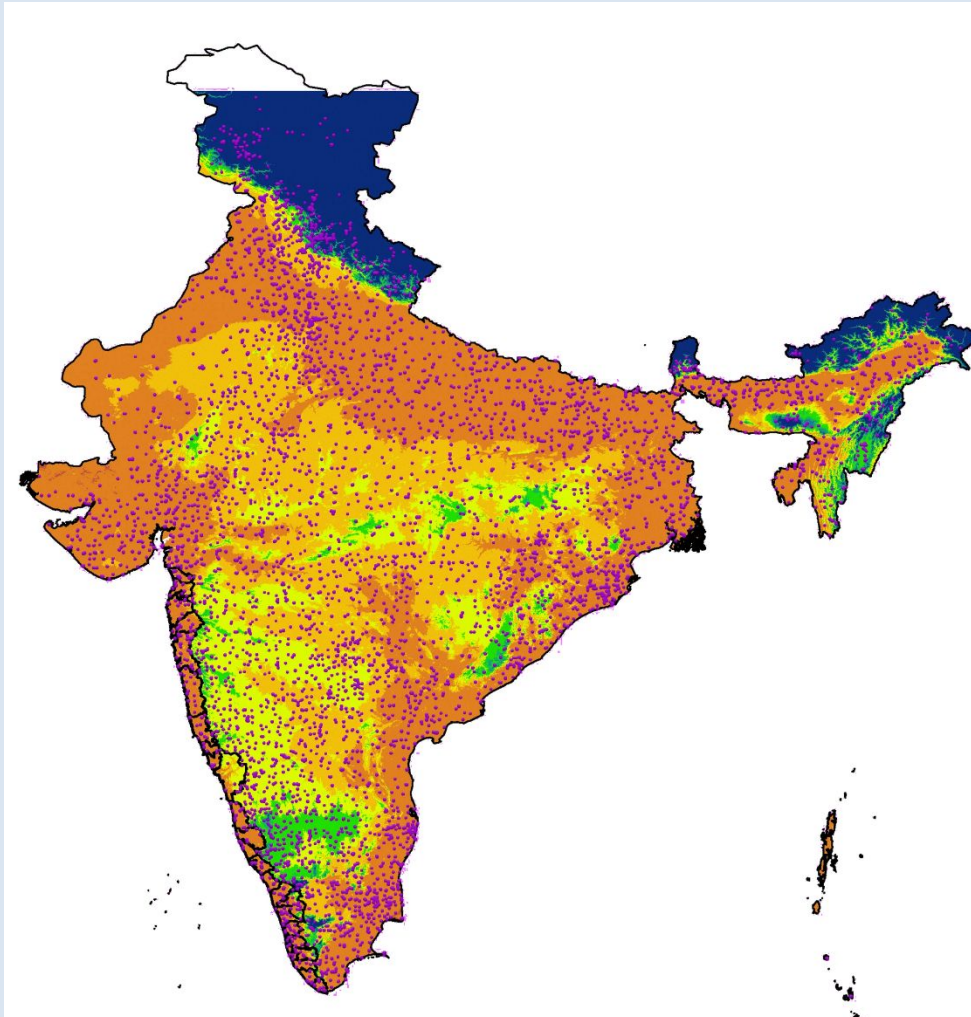

**2600** rain gauge stations on an average  
**6955** varying stations over the period

**547** are IMD observatory stations  
**494** are Hydro-Meteorology observatories  
**74** are Agromet observatories

Remaining are rainfall reporting

Rainfall:  
IMD New High Spatial Resolution (0.25X0.25 degree) Long Period (1901-2022) Daily Gridded Rainfall Data Set Over India. This data product is a very high spatial resolution daily gridded rainfall data (0.25 x 0.25 degree). The unit of rainfall is in millimeter (mm). Data available for 122 years, 1901 to 2022. Data is arranged in 135x129 grid points. The first data in the record is at 6.5N & 66.5E, the second is at 6.5N & 66.75E, and so on. The last data record corresponds to 38.5N & 100.0E. The yearly data file consists of 365/366 records corresponding to non leap/ leap years.

### ALL INDIA WEATHER SUMMARY AND FORECAST BULLETIN

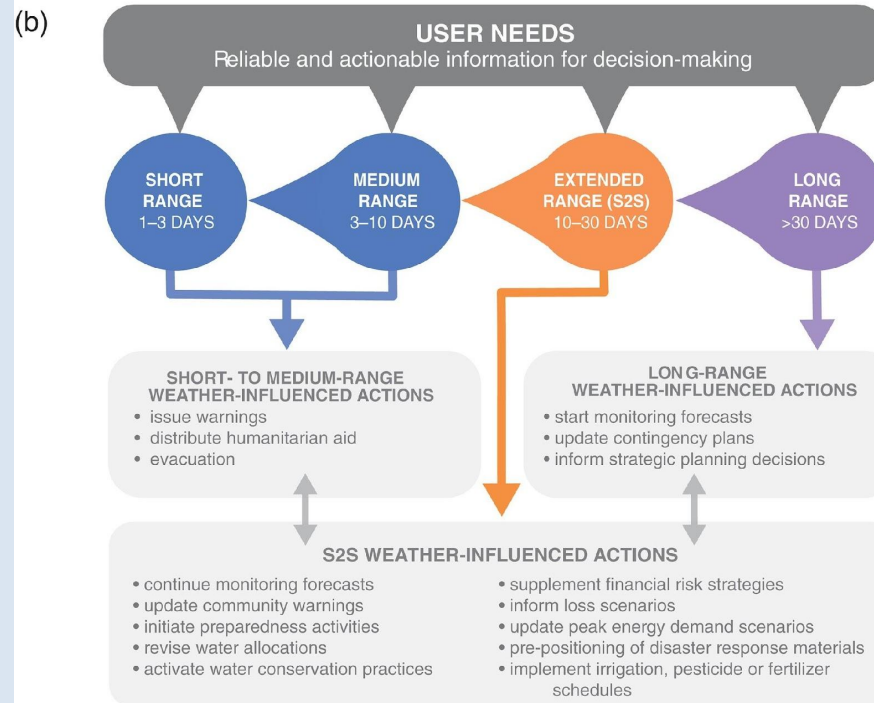

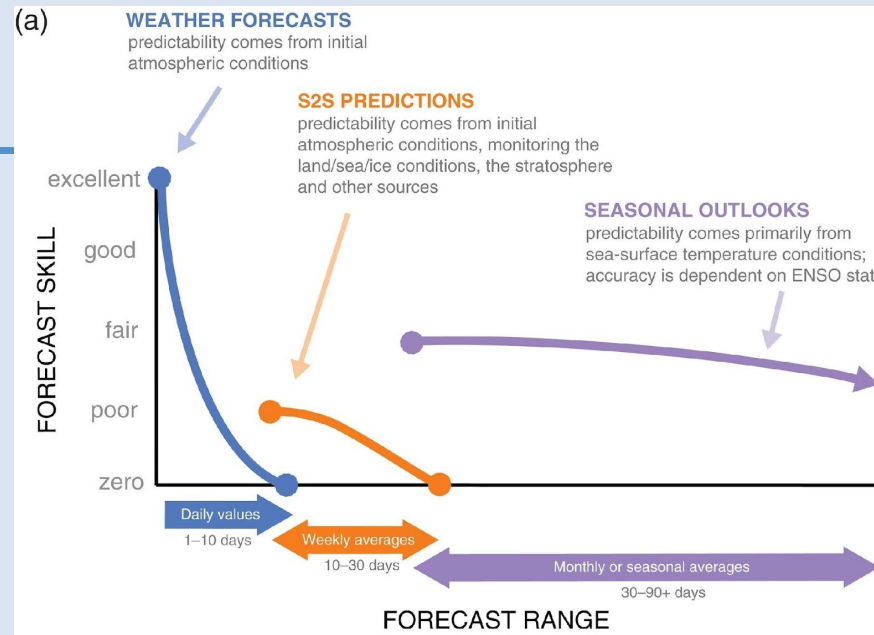

#### Significant Weather Features

##### Weather Forecast & Warning:

- ◆ **Northwest India:** A fresh spell of rainfall & thunderstorm activity is likely to commence over the region from evening of 23rd March with isolated hailstorm likely over Himachal Pradesh, Uttarakhand, Punjab, Haryana, Chandigarh, West Uttar Pradesh and Rajasthan on 23rd & 24th March. Isolated heavy rainfall very likely over Himachal Pradesh, Uttarakhand and Punjab on 24th March.
- ◆ **Central India:** Mainly dry weather likely over the region during next 2 days. Thereafter, a fresh spell of rainfall & thunderstorm/hailstorm activity is likely to commence over the region (Madhya Pradesh, Vidarbha & Chhattisgarh) during 24th-26th March.
- ◆ **South India:** Isolated light rainfall with thunderstorm & lightning likely over Tamilnadu, Puducherry & Karaikal on 22nd March and over Andhra Pradesh during next 5 days. A fresh spell of rainfall & thunderstorm activity is likely to commence over Telangana, Kerala & Mahe and interior Karnataka from 24th March.
- ◆ **Northeast India:** Scattered to fairly widespread light/moderate rainfall activity with thunderstorm, lightning & gusty winds likely to continue over Northeast India during next 2 days. Isolated heavy rainfall very likely over Arunachal Pradesh and Assam & Meghalaya on 22nd March.
- ◆ **East India:** Isolated to scattered rainfall with thunderstorm, lightning & gusty winds likely over East India on 22nd and decrease significantly thereafter. A fresh spell of rainfall & thunderstorm activity is likely to commence over the region from 26th March.

#### Main Weather Observations

- ◆ **Rainfall/thundershowers observed** (from 0830 hours IST of yesterday to 0830 hours IST of today): at most places over Arunachal Pradesh, Assam & Meghalaya, Sub-Himalayan West Bengal & Sikkim, Uttarakhand; at many places over Nagaland, Manipur, Mizoram & Tripura, Gangetic West Bengal, Odisha, Jharkhand, East Uttar Pradesh, Chhattisgarh; at a few places over Bihar, West Uttar Pradesh, Himachal Pradesh, West Rajasthan and at isolated places over Jammu, Kashmir, Ladakh, Gilgit, Baltistan & Muzaffarabad, Haryana, Punjab, East Rajasthan, Madhya Pradesh, Vidarbha, Gujarat, Madhya Maharashtra, Konkan & Goa, Andhra Pradesh, Telangana and Tamilnadu.
- ◆ **Significant amount of rainfall recorded** (from 0830 hours IST of yesterday to 0830 hours IST of today)(in cm): **Arunachal Pradesh:** Tuting (dist Upper Siang) 4; **Assam & Meghalaya:** Shella (dist East Khasi Hills) 9, Mawsynram (dist East Khasi Hills) 7; **Jharkhand:** Hazaribagh, Koderna-5 each, Giridih-4; **Sub-Himalayan West Bengal & Sikkim:** North Sikkim-G; Odisha: Kendrapara, Ganjam-5 each, Gajapati, Kalahandi-4 each; East Uttar Pradesh: Kheri-9, Pratapgarh, Varanasi-6 each, Barabanki-4; **Chhattisgarh:** Masnui (dist Bilaspur) 4, Patharia (dist Mungeli) 4, Mungeli (dist Mungeli) 4; **Coastal Andhra Pradesh & Yanam:** Vepada (dist Vizianagaram) 7, Gajapathinagaram (dist Vizianagaram) 4, Ranastalam (dist Srikakulam) 4; **Tamilnadu:** Pennagaram: Dharmapuri-9; Konkan: Pen (dist Raigad) 4.
- ◆ **Hailstorm observed** (from 0830 hours IST of yesterday to 0830 hours IST of today): at isolated places over East Uttar Pradesh, Chhattisgarh, Odisha, Jharkhand, Bihar and Odisha.

# FORECASTS | Heatwave Forecasts

CLIMATE DATA

## Q. What is criterion for declaring heat wave?

Heat wave is considered if maximum temperature of a station reaches at least 40°C or more for Plains and at least 30°C or more for Hilly regions.

### a) Based on Departure from Normal

Heat Wave: Departure from normal is 4.5°C to 6.4°C

Severe Heat Wave: Departure from normal is >6.4°C

### b) Based on Actual Maximum Temperature

Heat Wave: When actual maximum temperature  $\geq 45^\circ\text{C}$

Severe Heat Wave: When actual maximum temperature  $\geq 47^\circ\text{C}$

If above criteria met at least in 2 stations in a Meteorological sub-division for at least two consecutive days and it declared on the second day.

## Q. What is a criterion for describing Heat Wave for coastal stations?

When maximum temperature departure is 4.5°C or more from normal, Heat Wave may be described provided actual maximum temperature is 37°C or more.

**Current Temperature Status and Heat Wave Warning**

Dated: 21<sup>st</sup> March, 2023  
Time of Issue: 1630 Hrs IST

Observed Temperature Scenario:-

Maximum Temperature & its departure (Yesterday) (Annexure 1):-

- Maximum temperatures were in the range of 22-27°C over Punjab, Haryana, Chandigarh & Delhi, north Rajasthan, Uttar Pradesh, Bihar and Northeast states; in the range of 24-34°C over rest parts of the country except over Western Himalayan Region where these were in the range of 15-21°C.
- Yesterday's Highest Maximum Temperature on Plains: 37.2°C at Palakkad (Kerala).
- Markedly above normal (5.1°C or more):- NIL.
- Appreciably above normal (3.1°C to 5.0°C):- NIL.
- Above normal (1.6°C to 3.0°C):- NIL.

Minimum Temperature & its departure (Today) (Annexure 2):-

- Markedly above normal (5.1°C or more):- NIL.
- Appreciably above normal (3.1°C to 5.0°C):- NIL.
- Above normal (1.6°C to 3.0°C):- At a few places over Andaman & Nicobar Islands; at isolated places over East Madhya Pradesh, Bihar, Tamilnadu, Puducherry & Karakal.

Heat wave conditions:- NIL.

Warm night conditions:- NIL.

Percentile Temperature (Annexure 3):-

Temperatures Recorded at 1430 Hours IST of Today, the 21<sup>st</sup> March, 2023 (Annexure 4):-

- Cumbalatore (Tamilnadu) recorded the highest temperature of 36°C.
- 24 hours Temperature change at 1430 hours IST of today: Temperatures have risen between 1-3°C at most places over Himachal Pradesh, Punjab, Rajasthan, Madhya Pradesh and Bihar and at many places over Uttar Pradesh.

Wind Speed & Relative Humidity Recorded at 1430 Hours IST of Today (Annexure 5):-

- Maximum Temperatures Forecast and Heat Wave warnings during next 5 days:-
- Central India: Gradual rise in maximum temperatures by 2-3°C during next 3 days and no significant change thereafter.
- East India: No significant change in maximum temperatures very likely during next 24 hours and rise by 2-4°C thereafter.

Best mode of the Forecast: No significant change in Maximum Temperatures over India during next 5 days.

**CLIMATE DATA**

Primary school on Sagar Island in the Sundarbans in January 2014 | Nagraj Adve

The same school four years later in November 2017, submerged by the rising waters of the Bay of Bengal | Utpal Giri

1153815517

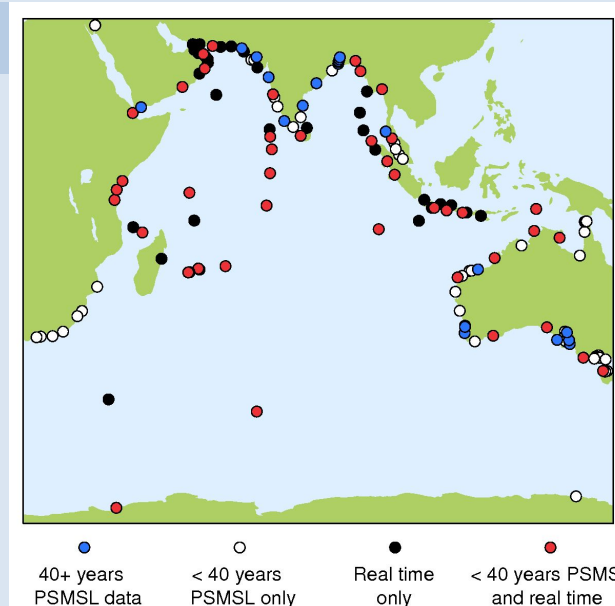

### Mumbai Sea Level Change

### Kolkata Sea Level Change

### Tide gauges

Link:

<https://psmsl.org/data/obtaining>

### Sea level rise and additional inland intrusion

The gently sloping area adjoining the coast, the continental shelf, has an average downward slope of about  $0.1^\circ$ .

A 3 cm rise for a slope of  $0.1^\circ$  would take away 17 meters of land.

The trigonometry:

Land intrusion

$$= \text{sea level rise} / \tan(\text{slope})$$

$$= 3 \text{ cm} / \tan(0.1^\circ)$$

$$= 1700 \text{ cm}$$

**Bramble Cay Melomy** is the first species to be extinct due to anthropogenic climate change.

Sea level rise inundated the east Indian Ocean island where they lived.

## Annual CO<sub>2</sub> emissions

### Annual CO<sub>2</sub> emissions

Carbon dioxide (CO<sub>2</sub>) emissions from fossil fuels and industry<sup>1</sup>. Land use change is not included.

Our World  
in Data

Source: Our World in Data based on the Global Carbon Project (2022)

OurWorldInData.org/co2-and-greenhouse-gas-emissions • CC BY

In 1950 the world emitted 6 billion tons of CO<sub>2</sub>.

Emissions have continued to grow rapidly; we now emit over 34 billion tons each year.

COVID: 2 billion tons dip, but not large enough to make a significant change.

<https://ourworldindata.org/co2-emission>

**1. Fossil emissions:** Fossil emissions measure the quantity of carbon dioxide (CO<sub>2</sub>) emitted from the burning of fossil fuels, and directly from industrial processes such as cement and steel production. Fossil CO<sub>2</sub> includes emissions from coal, oil, gas, flaring, cement, steel, and other industrial processes. Fossil emissions do not include land use change, deforestation, soils, or vegetation.

### Annual per-capita CO<sub>2</sub> emissions

#### Per capita CO<sub>2</sub> emissions

Carbon dioxide (CO<sub>2</sub>) emissions from fossil fuels and industry<sup>1</sup>. Land use change is not included.

Fossil CO<sub>2</sub> includes emissions from coal, oil, gas, flaring, cement, steel, and other industrial processes. Fossil emissions do not include land use change, deforestation, soils, or vegetation.

### Energy: electricity, heat and transport

#### Global greenhouse gas emissions by sector

This is shown for the year 2016 – global greenhouse gas emissions were 49.4 billion tonnes CO<sub>2</sub>eq.

## Book on rain data from budding weather folk

Student meteorologists observe World Water Day

Students of the St. Joseph's Upper Primary School, Malayinchippara, with their book on rainfall details of the Meenachil river basin. • VISHNU PRATAP

STAFF REPORTER  
KOTTAYAM

It's always so much fun for kids to play outside in the rain. For this young bunch of amateur meteorologists, measuring these showers and assessing its impact on the local environment offers even more excitement.

As the world celebrated World Water Day on Tuesday, a group of students from St. Joseph's Upper Primary School in Malayinchippara brought out a book on the local rainfall database of the Meenachil river basin. Eminent conservationist Madhav Gadgil released the book at an online function

details generally correlate with official measurements, while also helping one to understand the very localised nature of rainfall.

In his preface to the book, Roxy Mathew Koll, a climate scientist with the Indian Institute of Tropical Meteorology, Pune, said the initiative had taken the school closer towards being climate-equipped.

### Daily basis

"The school now monitors rainfall using rain gauges on a daily basis. This exercise helps the students and the community make sense of the rainfall and weather

Mr. Koll had also conducted training sessions for in rain-gauging and activities.

### Climate Action Group

These kids, members of the school's Climate Action Group, are also assisting the Meenachil River Rain Gauging Network run by the Meenachil River Protection Council (MRPC), a community-based activist collective.

Commenting on the initiative, Aaby Immanuel, secretary, MRPC, said plans are also afoot to install flow monitoring scales and a thermometer on the premises to measure
